ST. JOHNS CROSSING HOA

LAWN CARE

Maintenance

Keep weeds under control.

A healthy lawn resists weeds, but a few interlopers are inevitable. It only takes a few minutes to grub out dandelions or pull chickweed from the lawn. Weeds compete with grass so pull them in the spring before they spread or go to seed. This will eliminate the competition and help get your lawn off to a good start.

Please treat your lawn with a weed killer.

Get your lawn mower ready for the season.

Rake your lawn to remove any leaves or twigs. The first time you mow, set the mowing height about ½ inch lower than normal, to break up light debris. After that, set the mowing height back up to prevent injuring your lawn and leaving an opening for crabgrass and other weeds to settle in.

Pressure wash your home.

A clean community attracts new people, who could potentially turn into new residents. Green algae, mildew, and mold are a common sight on vinyl-siding houses. Everyone has a responsibility to make their community a place they are happy to live in. Pressure washing eliminates unsightly grime and dirt buildup with the flick of a button.
